

Turning manual chaos into a 60-second pipeline

Facility Request Automation | Yoghesh (wsnh2022) | n8n + Google Sheets + Gmail

330 HOURS SAVED / YEAR	Rs.1.65L ANNUAL COST ELIMINATED	<60s REQUEST-TO-TICKET TIME
----------------------------------	---	--

--- 01 PROBLEM

Everything ran through a person's inbox

A mid-size office was fielding 330+ facility requests every month - AC repairs, IT issues, courier pickups, parking slots. Each one required an admin to manually type it into a tracking sheet, send a confirmation email to the employee, and CC the department head. That is 5 minutes of repetitive data entry per request, across 22 working days.

- 27.5 admin hours burned every month on copy-paste work
- Employees waited hours - sometimes days - for any acknowledgment
- Requests buried in email inboxes, no ticket numbers, no audit trail
- 5-10% of requests quietly fell through the cracks

--- 02 SOLUTION

A pipeline that runs itself

Built an end-to-end automated ticketing system using n8n as the workflow engine. An employee fills out a web form in 60 seconds. The moment they submit, the system handles everything - with zero manual work at any step.

01	Web Form Employee selects a request type (AC, IT support, courier, parking, etc.), fills in name, email, department, date needed, and extra details. Takes about 60 seconds. No phone calls, no emails.
02	Webhook Trigger The moment submit is hit, the form data is sent via HTTP POST to n8n's webhook URL. n8n wakes up instantly and begins processing - no polling, no delay, no human checking an inbox.

03	Unique Ticket ID n8n generates a timestamp-based ID (e.g. TKT-1714892341000) unique to that submission. This ID is attached to every downstream action so nothing gets mixed up or lost.
04	Google Sheets Log All form fields plus the ticket ID and timestamp are appended as a new row in a shared Google Sheet - searchable, sortable, visible to anyone with access. Replaces the old email chaos.
05	Dual Email Alerts Two emails fire simultaneously. Employee receives their ticket number as confirmation. Admin receives full request details ready to act on. Both arrive in under 60 seconds.

--- 03 OUTCOME

The numbers speak clearly

METRIC	BEFORE	AFTER
Time per request	5 minutes	0 minutes
Employee wait time	Hours to days	Under 60 seconds
Monthly admin hours	27.5 hours	0 hours
Annual labor cost	Rs.1,65,000	Rs.0
Lost requests	5-10%	Eliminated

n8n	HTML / CSS / JS	Google Sheets API	Gmail API	Webhook Architecture
